## Best-in-class anti-malware protection — the foundation of the Kaspersky Lab security platform

Kaspersky Lab's multi-layered protection technologies are developed in-house by people passionate about security. The result, independent tests confirm, is the most powerful and effective security solution in the industry — there is no better protection for your organization.

**Protection from Known, Unknown and Advanced Threats** — unique, sophisticated technologies identify and eliminate existing and emerging threats.

**Automatic Exploit Prevention** — proactively targets and identifies unknown and advanced threats.

**Cloud-Assisted Protection** — using real-time information from the worldwide Kaspersky Security Network.

**System Watcher** — Provides a unique file-restore function should the system be impacted.

**Host-based Intrusion Prevention System (HIPS) with Personal Firewall** — HIPS restricts activities according to the application's trust level — supported by an application-level Personal Firewall, which restricts network activity.
